Community Partnerships
Community Partnerships = Improved Student Health and Learning

Linking community activities to the classroom improves behavior and positively impacts student achievement. Community partnerships add depth and practicality to classroom instruction by bringing the outside world in. Examples of effective partnerships include: local farmers connecting students to the places where their food is grown; extension educators and grocery market dietitians teaching students how to read food labels and identifying appropriate portion sizes; and local fitness centers providing a guest yoga or Zumba instructor to expose students to an array of lifetime fitness activities.

Elements of Effective, Sustainable School-Community Partnerships
- Form a School Wellness Council comprised of school and community stakeholders.
- Conduct a needs assessment to identify gaps in services that community partners can fill.
- Identify any connections among school staff or families with local businesses and nonprofit organizations. Utilize your network!
- Designate a person located at the school to lead the coordination of school–community partnerships.
- Set clear expectations and establish shared accountability for school and community partners.
- Develop a detailed sustainability plan, which includes diversified funding streams.
- Co-create a communication plan to share program successes and inspire others.

What Community Partners Can Do
Community partners can help with school wellness initiatives by encouraging your students to develop healthy habits for a lifetime of good health. Typical partnerships include projects such as:

- After-school physical activities
- School gardens
- Farm to school
- Nutrition education
- Professional development
- School health fairs
- School food pantries
- Safe Routes to School
- School-based health centers

“The Action for Healthy Kids grant we received allowed us to purchase active indoor recess equipment for our students.”

Whole School, Whole Community, Whole Child

It takes a village to raise healthy kids. The Whole School, Whole Community, Whole Child (WSCC) model reflects the symbiotic relationship between a student's holistic well-being and their academic performance. Just as a bike won't work with two flat tires, a child whose health needs are unmet will not perform optimally in the classroom. The Association for Supervision and Curriculum Development (ASCD) and the Centers for Disease Control and Prevention (CDC), co-creators of the WSCC model, acknowledge this is no small feat and encourage community collaboration to achieve the task of educating the whole child.

WSCC Elements

1. Health Education
2. Physical Education & Physical Activity
3. Nutrition Environment & Services
4. Health Services
5. Counseling, Psychological & Social Services
6. Social & Emotional Climate
7. Physical Environment
8. Employee Wellness
9. Family Engagement
10. Community Involvement
